

Jianye District FSN Technology Consulting Center

To All Relevant Medical Institutions:

Fu's Subcutaneous Needling (FSN), first developed at China's First Military Medical University in 1996, has evolved over 29 years of relentless research and innovation. Originating as a simple acupuncture technique, it has now advanced into a comprehensive medical discipline integrating diagnostic and therapeutic capabilities. There were some groundbreaking frameworks from FSN including "tightened muscles," "Reperfusion Approach," "Poor Blood Environment," and the "New Qi-Blood Theory", which transformed FSN—a subcutaneous needling method with immediate efficacy—into a pivotal branch of modern acupuncture development.

FSN have the characteristics of standardized operation, rapid feedback of therapeutic effects, and safe-green processes. It has been recognized as a National TCM Appropriate Technology by the National Administration of Traditional Chinese Medicine in 2009. It's clinically effective not only for pain management (e.g., musculoskeletal disorders) but also for internal medical conditions and gynecological miscellaneous diseases.

FSN has get Global Certifications & Patents:**CE Certification (EU, 2017); FDA Approval (U.S., 2018); Taiwan Medical Device Certification (2019); Medical Device License (MDL, Canada, 2021); U.S. Patent Granted (October 12, 2021)**

To Benefit a Wider Range of Medical Practitioners, Building on the success of FSN Lecture Tours over the years, we are pleased to announce the August 2025 FSN Lecture Tour, to be held in Shen'zhen, Anhui Province, from August 9 to 10, 2025. Details are outlined below:
